

Process Model: SCRUM

Given the fact that we are to present and demo this project by December the 7th, we decided to follow a SCRUM process model for this project. Another reason we came to this conclusion is because of the flexibility and independence that SCRUM offers, as Under Scrum the scope of the project (what is to be done) is variable but time is constant. Another reason for choosing scrum is we felt there was a big difference in importance of each task, and we wanted to prioritize the important task, we decided that we will not be meeting everyday but rather 3 times a week, where we will be mainly discussing the progress on the sentiment analysis algorithm as it is of main importance, and after successfully doing so we will then focus on the developing the loading page.
